

IDENTIFICATION: Mohr's Barbara's Buttons (*Marshallia mohrii*) may reach a height of 2 feet or more. Its small white-pink flowers bloom in a branched arrangement during May and June. The plant grows in moist to wet openings in woodlands and along shale-bedded streams. It often grows in association with grasses and sedges, and prefers full sunlight or partial shade.

FORESTRY CONSIDERATIONS: This plant can probably tolerate light thinnings. Mechanical site prep and clearcutting could be very damaging to this plant, as would some herbicides.

DISTRIBUTION BY COUNTY: Known in Bibb, Cherokee, Calhoun and Etowah counties in Alabama.
